

How To decorate the blanket

1. Select "Add Design" or "Add Text"

2. Add designs and/or add text to the area. The Select Artwork dialog will appear. Select the My Designs folder in the Categories listing. Use the Browse button upload an image from your hard disk or network. Designs can comprise of single or multiple images - stock or your own. Before using your own, you must upload them from your computer.

Select the "My Designs" folder to view your own uploaded images. Select the image you wish to add, and click the Select Image button in the popup. The image will appear on the product. Repeat the process to add more images to your design.

Supported file types

The Lifestyles by Ramco's online designer handles a range of different image types, including: JPG, PNG, GIF & TIF

Tip: If you intend to upload an image containing a transparency, we recommend using PNG format. Optimum image size

Uploaded images should be as large (hi-res) as possible.

When you upload an image, the online designer will automatically scale it as large as possible without losing quality.

Scale it down to suit your purposes.

If you scale the image up, you will notice the quality meter turn from green to amber.

If you go into the red, a warning notice appear. This indicates that the uploaded image cannot be printed at the size you require. You will either need to provide a higher resolution image or reduce the size of your design.

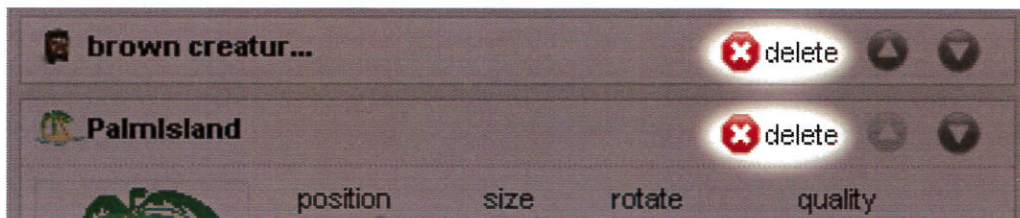

If you add a product to the cart containing an oversized image, you will be warned that this will result in a poor quality product.

Moving & Scaling Images

Selecting: Once you have added artwork to your product, select it by clicking it. Sizing handles will appear at the corners of the image. It will also appear within the control panel on the right. This panel gives you further control of the image.

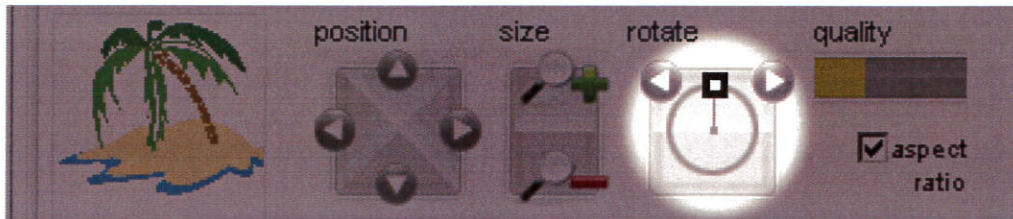

Deleting

To remove an image, select it. Click the Delete button in the Designs & Text panel to the right.

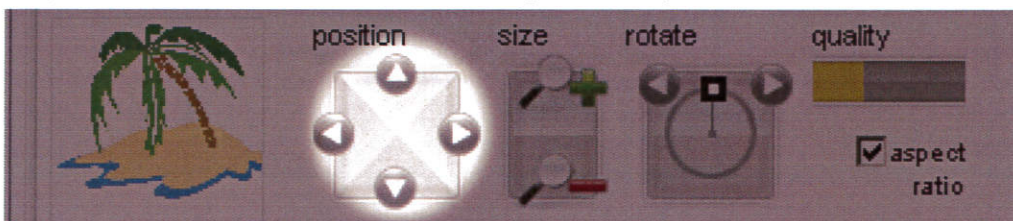

Rotating

Select an object and click the rotation arrows of the Rotate control in the Designs & Text panel. Click left or right arrows to rotate your image clockwise or anti-clockwise. Alternatively, move the dial with your mouse.

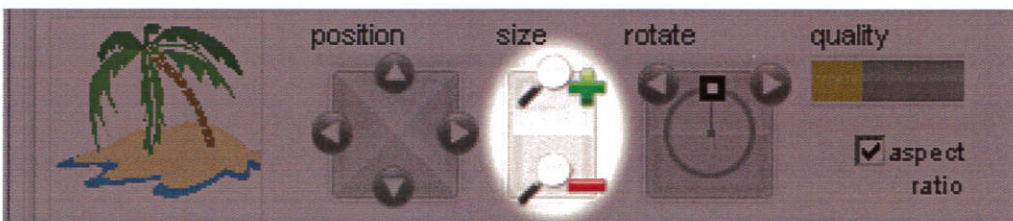

Positioning

Position objects by click & drag it with the mouse. Alternatively, use the Position controls in the Designs & Text panel.

Resizing

Size objects by dragging the sizing handles with your mouse. Alternatively, resize images with fine precision using the Size controls in the Designs & Text panel.

Setting transparency

Depending on the type of image you have added, you can remove the 'white box' around your uploaded image. Use the Select Transparent Color option and select white.

This will remove all white from within your image, effectively removing the white box.

Note: Removing white will remove all white from your image. You can in fact use any color for your transparency color. Make sure it's one which is not used in the image itself.
